

MAPTASKR IN THE FIELD

Combine Microsoft Field Services and ESRI ArcGIS data together to gain actionable insights.

#BetterTogether

MAPTASKR AND FIELD SERVICES?

Maptaskr is a comprehensive geospatial productivity solution for Dynamics 365, which works natively with first party Apps such as Field Services. It enables advanced mapping capability, so users can finally bring a geospatial dimension to their business data and processes.

Our experience with the Esri suite of products provides us the unique ability to integrate corporate geospatial data directly into your Field Services solution.

Both your officer and field worker staff will then have a unified visual solution to be able to create, action and complete their activities, such as Work Orders, with the support of an interactive and informative map interface.

Being able to create and manage Cases, Work Orders and Assets from within your Field Services Implementation using a unified mapping interface with pinpoint accuracy, streamlines all activities across the Enterprise and achieve performance excellence.

CONNECT YOUR ARCGIS DATA

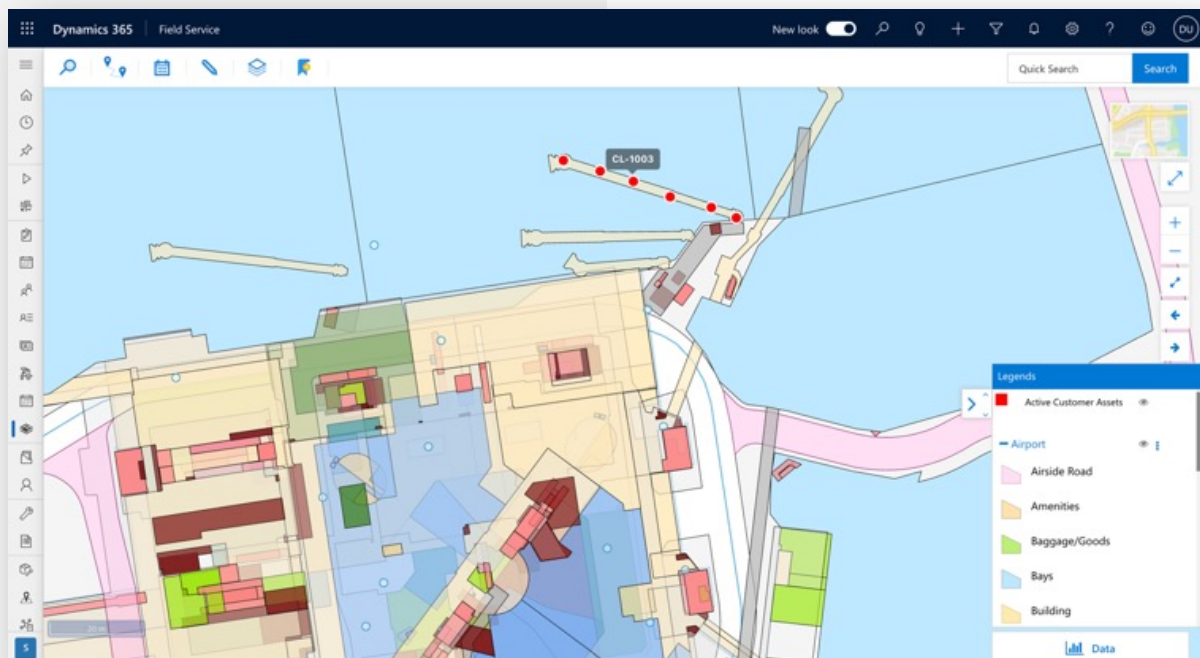

Connect Dynamics 365 and existing Esri ArcGIS data using Maptaskr. Enable your field staff to act, by providing them relevant business-critical data, and giving your business data geospatial context.

MANAGE RELATIONSHIPS WITH EASE

Configuring direct relationships between your business and ArcGIS data, simplifies the process of discovering which items are located. Enabling easy creation, management and execution of business functions out in the field.

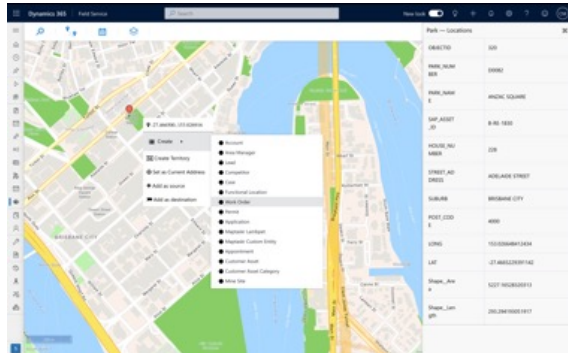

PERFORM INSIGHTFUL ACTIONS

With Maptaskr you have the whole picture of your operations at your fingertips, enabling insightful and effect business actions straight from the map, in the office and out in the field.

MAPTASKR IN THE FIELD

Enable Geospatial Productivity within Field Services.

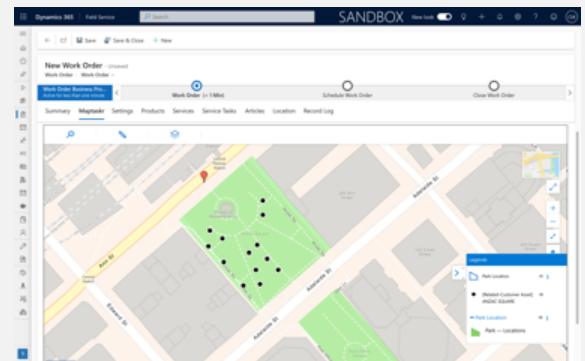

CREATE A WORK ORDER WITH EASE

Creation of work orders is simplified with the ability to search for locations or places of interest, to be able to pinpoint exactly where a record should be created. Overlaying existing Esri ArcGIS data over your business data enable your staff to act see exactly what they are looking for, by providing them relevant business-critical data along with geospatial context and insight.

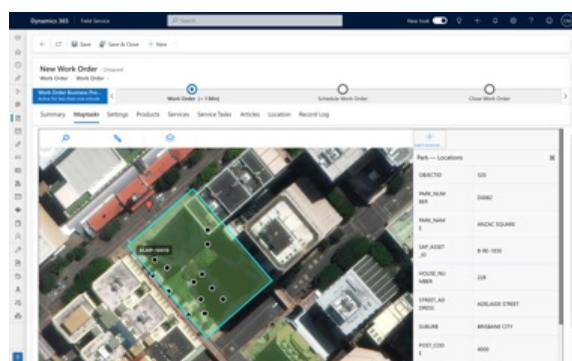

ASSOCIATE A FUNCTIONAL LOCATION

With the ability to configure direct relationships between your business and ArcGIS data, staff are able to associate business records, such as Work Orders, to a Functional Location with a simple click on a map. This facilitates the discovery of which Assets are found in that location.

SELECT YOUR ASSETS AND GET PRODUCTIVE.

Once Assets are available, they can also be associated with the Work Order, providing a streamlined approach to capturing all the necessary details to a business record on creation. This visually insightful approach delivers effective business actions from the map, straight to your office staff and out to workers in the field.

Visualise Your Data - Discover New Insights
